

# Holland House Liquid Roofing

# CASE STUDY

We were contacted by an existing client to provide quotations for the flat roofing works at Holland House; London, a Grade I listed building.

## Problem

Our team successfully mobilised at Holland House, a prestigious Grade I listed building, and promptly commenced installation of the TOR Elastaseal Z system. This high-performance waterproofing solution was selected for its durability and long-term protection, perfectly suited to the heritage requirements of the site.

## Installation

The client was thoroughly impressed with the outcome, gaining complete peace of mind and the robust insurance their building demands.

## Feedback

## Solution

The roofs consisted of a terrace and walkway, therefore the system we put forward required an anti-slip finish ensuring safety for the public. We contacted TOR our liquid waterproofing manufacturers to meet on site and get a specification to propose to our client. We proposed a supply and install TOR Elastaseal Z liquid waterproofing to Holland House Main Roof & Café walkway with anti-slip aggregate.

## Completion

Works progressed smoothly, with meticulous attention to detail throughout each stage of application. We concluded by sealing the final anti-slip aggregate, prioritising safety without compromising on finish.
